A full stack clone of SoundCloud where users can upload and listen to songs

- Integrated Ruby on Rails back end following MVC design pattern connected to React/Redux front end with AJAX requests
- Implemented upload functionality for music and photos by connecting Rails back end to AWS S3
- Created a music player using React's local state to hold record of the current song's metadata

FTP | React, Redux, JavaScript, HTML5, CSS3, SCSS, MongoDB, Express.js, Node.js, Twilio

[Live](#) | [GitHub](#)

A lightweight CRM tool for protest organizers to communicate with fellow activists through SMS messages

- Collaborated in a team of four, contributing to both front end and back end features and adhering to a strict Git workflow to minimize merge conflicts
- Developed the feature of uploading contacts via CSV to provide users an option for faster contact creation
- Integrated the Twilio API as an SMS gateway and recorded outbound messages on MongoDB allowing users to send messages and review their outbound message history

Heat Check | JavaScript, HTML5, CSS3, SCSS, D3, Webpack

[Live](#) | [GitHub](#)

A data visualization web application where users can compare the top NBA players' stats

- Added multiple click event listeners to each button to display data based on the user's request
- Utilized the D3 library to parse CSV files of each selected player and the requested stat to display as a line graph
